Pittsburgh Lock Mortise

The Pittsburgh Instrument & Machine Co., No. 236 Third Avenue, Pittsburgh, Pa., are placing on the market the Pittsburgh Lock Mortise, shown herewith. They state that it will cut an opening for a mortise lock in a

door in a few minutes; will develop a speed of twelve hundred revolutions in a minute; is self-centering and self-feeding, and combines speed in operation with accuracy in the result obtained. It will cut a mortise from five-eighths of an inch to one and three-eighths inches wide, four and three-fourths inches deep, and six inches long. All wearing parts are hardened. The cutters are made of high grade tool steel, specially treated for the use of wood-working machinery.
